

Project name: Lawyers

Submitted By Students of Batch

PR2-202109G

Acknowledgment

First of all, we are very thankful to Almighty ALLAH, who is Greatest, Glorious and Merciful, and who helps us in carrying this project work in such a smooth and efficient manner and also granting us the authenticity to face the challenges regarding this project. We are also thankful to our project supervisor, Sir SHABBIR AHMED who helped us with his project experience. At every step of the project he facilitates and encourages us to finish this project in such a productive manner. We would also like to thank all respondents of the project to cooperate with us.

ONLINE LAWYERS APPLICATION

WEBSITE SYSTEM

Table of Contents

Introduction:

Today everyone need legal services for some or the other reason. It is very difficult to find lawyers with respective specialization. Getting appointment is also very difficult. There is a need to have a website for doing all this.

Proposed Solution:

We need to design and develop a website for lawyers and their service. Customers can register and search for lawyers basing their requirement. Info related to lawyers will be there in website which customers can browse through and view their profile before contacting them.

Customers can book a schedule for meeting with lawyer. We also had a discussion in regard to few clarifications and inputs specifically to understand the project flow.

Features/Requirements

- Registration for customer as well as Lawyers.

- Panel for Lawyers showcasing their details
- Search by lawyer location, lawyer services like criminal, divorce, affidavit, civil, and then schedule a meeting with the same.
- A customer search will show minimal info of a lawyer related to the service which customer searches, a click on lawyer profile should go to lawyer profile, where in customer can schedule a meeting and book a slot.
- Login through normal registration form for customer is mandatory and for a lawyer registration form is required. Basically user/password required.

User Types:

Module details:

• Customer / Lawyer registration
• Panel for lawyers
• Search by lawyer location, lawyer services like Criminal, divorce, affidavit, civil, and then meeting place
• View Lawyer profile / Book Appointment

- Login through normal registration form for customer is mandatory and for a lawyer registration form is required. Basically user/password required
- Showcase of the lawyer when they search one by one
- Admin Pages

Login Pages

The screenshot shows a login form with the following fields:

- Username:** Admin
- Password:** *****
- Buttons:** A single "Login" button at the bottom.

LOGIN FILE SOURCE CODE

The screenshot shows a code editor with two files open:

- login.php**: A PHP script that handles user login. It starts with session initialization and error reporting. It checks if a 'login' POST variable is set. If so, it retrieves the username and password from the POST array. It then initializes an error array. It checks if both the username and password are empty. If either is empty, it sets an error message. It then checks if the number of errors is zero. If so, it runs a MySQL query to select all columns from the 'register' table where the username matches the posted username. It fetches the result and checks if there is exactly one row. If so, it retrieves the password from the result and compares it with the posted password. If they match, it sets session variables for role_id, name, unique_id, and profile, and then redirects to 'admin/index.php'. If there is no match or if the number of errors is not zero, it outputs an alert message.
- lawyerform.php**: A PHP script that handles lawyer registration. It includes a function.php file. It checks if the 'role_id' session variable is 1 (Admin). If so, it header-redirects to 'admin/index.php'. If the 'role_id' is 2 (Lawyer), it header-redirects to 'lawyers/index.php'. If the 'role_id' is 3 (Client), it header-redirects to 'index.php'. It then checks if the 'role_id' is 1. If so, it includes 'function.php', sends headers, and then outputs a registration form. The form has a title 'Login Pages', a text input for 'Email', a password input for 'Password', and a submit button. If the 'role_id' is not 1, it outputs an alert message.
